## PROJECTS

- **Crustal Imaging of the Southern Central Andes by Ambient Noise Autocorrelation** 2023-Present
  - Developing a coding framework to perform autocorrelation on seismic ambient noise.
  - Using broadband and nodal seismic data from TANGO seismic deployment in Chile and Argentina.
  - The goal is to image the Moho, crustal discontinuities, and shallow detachment faults.

- **Orogen-Parallel Variations in Seismicity in the Central Andes** 2023-Present
  - Used broadband and nodal seismic data from TANGO seismic deployment in Chile and Argentina.
  - Applied a deep-learning framework for earthquake detection.
  - Developed and compared two earthquake catalogs along two transects of Central Andes.

- **Seismicity and Present Day Crustal Deformation in the Southern Puna Plateau** 2022-2023
  - Implemented a deep-learning framework for low-magnitude earthquake detection.
  - Developed a new earthquake catalog, stress model, and seismic tomography model of Puna plateau.
  - Identified the variations of crustal deformation for different segment of the Puna plateau.
